Adizes Assessments Developer Guide

Express Diagnostics and Engagement Survey: logic, questions, scoring, reports and data, in every language, to rebuild them on another platform.

Reference implementation v1.2.0 · github.com/Adizes/alis-sample · 2026-10-30

Contents

1. Start here (package contents, approach, glossary)

Appendix C · Screens

Adizes Assessments — Developer Handoff

This package documents the Adizes assessments you will rebuild on your own platform and database:

- **Express Diagnostics (ED):** 67 statements, rated by a company's leadership. You get a group report with the participants' names, 16 organizational factors, radar charts and a wording for each statement chosen by score.
- **Engagement Survey (ES):** 50 questions, anonymous. Each participant is classified into one of 4 engagement levels, and you get a group report by area with factors, the questions that matter most, and comments.

A working reference implementation is live, and the source code is public at **github.com/Adizes/alis-sample**. Everything in this package was produced from that code, so the documents, the data files and the live system agree.

> **What must be identical:** questions, answer values, scoring rules, minimums/anonymity rules and report content. The scoring and anonymity rules reproduce the legacy platform (s.adizes.com) exactly and are verified against a real legacy report. **What you are free to change:** look and feel, storage, how invitations and emails are sent, how PDFs are produced, and the admin.

How to use this package

Read	What it gives you
`01-system-overview.md`	Concepts (company → employees → launch → invitations → answers → report), life cycle, rules, languages, emails
`02-express-diagnostics.md`	Answer scale, exact scoring algorithm with pseudo-code, statement wording rules, report contents
`03-engagement-survey.md`	Scales per question, importance, engagement classification, aggregation, anonymity rules, report contents
`04-reports.md`	How the PDFs are built, recommended technology, page-by-page layout, colours, fonts, assets
`05-participant-experience.md`	The answering flow screen by screen: personal link, resume, keyboard, review, submit, states
`06-admin-and-data.md`	Admin features, data model, API (request/response), error codes, security
`07-verification.md`	How to prove your implementation matches: test vectors and acceptance checklist
`questions-express-diagnostics.md`	All 67 statements × 3 wordings, in every language
`questions-engagement-survey.md`	All 50 questions, their scale and factor, every answer option, in every language

Data files (use these, don't retype)

File	Content
`data/express-diagnostics.json`	Model (cells, question→cell map, norms, radars) + **every text** in every language (UI, questions, report)
`data/engagement-survey.json`	Model (factors, groups, scale per question, thresholds) + every text in every language, with the answer options already resolved per question
`data/emails.json`	Invitation, reminder and report-email texts per language
`data/test-vectors/*.json`	Inputs and expected outputs to test your scoring (see `07-verification.md`)

Samples and visuals

Folder	Content
`samples/`	Real group reports produced by the reference implementation: ED and ES in English and Spanish, plus the exact inputs used (`sample-report-inputs.json`)
`screens/`	Screenshots of the participant flow (desktop + mobile) and the admin
`source/`	A copy of the reference implementation (the scoring engines and report renderers are plain JavaScript and can be reused as-is, see `04-reports.md`)

Try it interactively

- **Admin:** use the link you received together with this package. Sign in with an allowed email; you will get a 6-digit code from info@adizes.com. Create a company, add at least 5 employees, create a launch of each test, open it and use **Copy links** to answer as different participants.
- **Participant pages:** www.adizes.com/express-diagnostics and www.adizes.com/engagement-survey, each needing a personal link (`?t=TOKEN`) from a launch.

Recommended approach (summary)

1. **Load the content from `data/*.json`** into your database (questions, wordings, labels per language). Keep the question order and the raw answer values: they are what is stored and scored.
2. **Port or reuse the two scoring engines** (`source/shared/ed-engine.js`, `source/shared/es-engine.js`). They are about 100 lines each, have no dependencies, and are pure functions: input arrays → result object. If your backend is JavaScript/TypeScript, use them directly. Otherwise, port them and verify with the test vectors.
3. **Store raw answers per participant.** Compute results when the report is generated, not when answers come in. This is how the reference works.
4. **Reports:** either reuse the reference renderers (jsPDF, run in the browser or in Node; inputs are plain JSON), or rebuild them as HTML templates and print them to PDF with a headless browser. See `04-reports.md` for the trade-offs. The sample PDFs are the visual reference.
5. **Enforce the anonymity rules on the server** for the Engagement Survey: no link between answers and people, 5-answer minimums, and small areas never shown alone.
6. **Verify** with `07-verification.md` before going live.

Glossary

Term	Meaning
Company	Client organization
Employee	A person of the company (name, email, **area**, position). Area is used by ES results
Launch	One run of one test for one company (e.g. "Leadership team · Nov 2026"). A company can have many launches of both tests
Invitation	One employee in one launch, with a personal secret link (token)
Response	The answers submitted through one invitation
Cell / factor	One of the organizational dimensions the questions are grouped into (16 in ED, 15 in ES)
Raw value	The number stored for an answer (1–5). Never translated, never re-ordered

Version of the reference implementation documented here: **v1.2.0**.

1 · System overview

The two tests at a glance

	Express Diagnostics (ED)	Engagement Survey (ES)
Purpose	Diagnose systemic organizational problems (Adizes methodology)	Measure employee engagement
Who answers	Leadership / management team	Any employees
Items	67 statements	50 questions
Answer	4-point scale + “I cannot answer”	4-point scale + “Don’t know” (Q50: 5-point, no “Don’t know”) **and** an importance level per question (+ optional comment)
Identity	Named: the report lists who took part	**Anonymous:** answers are stored without any link to the person
Minimum to produce a report	1 response (the admin may raise it per launch)	**5 responses (fixed)**
Minimum to create a launch	1 participant	**5 active employees in the company and 5 participants**
Result per person	none (only group)	Engagement level: fully engaged / engaged / somewhat engaged / disengaged
Group report	16 factors, 2 radars, causal diagram, every statement worded by its score	Levels, levels by area, 15 factors, what matters most, all questions, comments
Languages	English, Spanish (extensible)	English, Spanish (extensible)

Participants **never see results**. They answer and get a thank-you screen. Adizes staff generate the group report in the admin and email it to the people they choose.

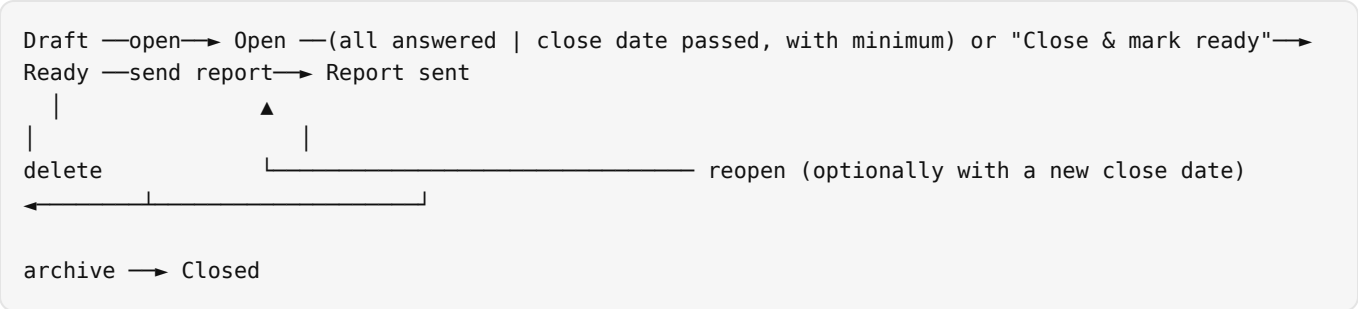

Entities and flow

```
Company ──< Employee (name, email, area, position)
   │
   └──< Launch (type ED|ES, language, close date, minimum, recipients, status)
           │
           └──< Invitation (employee, secret token, status) ──1:1── Response (answers)
                                                                          │
                                       Group report (PDF) ◄── all responses of the launch
```

1. **Admin creates a company** and its **employees** (one by one or by pasting a list). Area matters for the ES (results by area).
2. **Admin creates a launch** for one test: name, **language**, optional closing date, report recipients, and participants (chosen from the company's employees). The launch starts as a **Draft**.

3. **Admin opens the launch.** Either the system emails every participant their personal link (from info@adizes.com), or the admin copies the links and shares them however they want. Both can be combined.
4. **Participants answer** through their personal link (`…/express-diagnostics?t=TOKEN` or `…/engagement-survey?t=TOKEN`). A link works once: after submitting, it shows "You have already answered".
5. When **everyone has answered**, or the **closing date has passed** with the minimum reached, the launch becomes **Ready** and admins get an internal notice. The admin can also close it manually once the minimum is reached.
6. **Admin generates the group report** (PDF), which is saved (Google Drive in the reference), and **sends it** by email to the chosen recipients. It can be regenerated and resent.

Launch life cycle

Status	Meaning	Participants can answer?
Draft	Being prepared; participants can be changed; can be deleted	No ("not open yet")
Open	Collecting answers. Participants can still be added or removed; people who already answered are never removed	Yes
Ready	Minimum reached and collection finished. Report can be generated	No ("closed")
Report sent	Report emailed at least once	No
Closed	Archived	No

Rules:

- **Automatic Ready** is checked after every submission and once an hour:
  - If all participants answered and the count is at least the minimum, the launch becomes Ready.
  - If the close date has passed and the count is at least the minimum, the launch becomes Ready.
  - If the close date has passed **below** the minimum, the launch stays Open. Admins get **one** notice ("closing date passed without the minimum") and can send reminders or extend the date.
- A report can be generated and sent while the launch is still Open, as long as the minimum is reached (useful for previews). Sending it then does not change the status.
- **Minimum responses:**

- ED: default 1. The admin can raise it per launch.
- ES: always 5. It is not editable, and the admin does not show the field for ES.

Invitation life cycle

Status	Meaning
Pending	Created, email not sent (the link already works once the launch is Open)
Sent	Invitation email sent (reminders keep this status and add 1 to the reminder count)
Completed	Answers received
Removed	Participant removed from the launch before answering (link stops working)

Reminders go only to people with status **Sent** who have not answered yet.

Language rule

The **launch language** governs everything participants see: invitation and reminder emails, the survey (there is no language switch for participants), the thank-you page, and the group report. The admin itself is in English. Internal notices to Adizes staff are in Spanish in the reference implementation; this is free to change.

To add a language, add one more entry for each text set in `data/*.json` (UI + questions + report) and `data/emails.json`. Keys, question order and raw values must not change.

Anonymity rules (Engagement Survey) — must be enforced server-side

1. The stored response has **no employee ID, invitation ID, name or email**. It keeps:
   - the launch ID
   - the **day** of submission (no time)
   - the language
   - the employee's **area** (copied at submission time)
   - the computed level
   - the answers, importance levels and comments
2. The invitation is marked Completed with **only the day** (no time), so timestamps can't be matched to responses.
3. Responses are stored in **random order** (the reference inserts each new row at a random position), so row order doesn't reveal who answered.
4. No report below **5 responses**.
5. **Areas with fewer than 5 responses are never shown on their own.** They are pooled into “Other areas” if together they reach 5; otherwise they only count in the company total.
6. A launch needs **5 active employees** in the company and **5 participants**, and participants can't be reduced below 5.
7. Comments are shown word for word and anonymously (participants are told this before answering). The admin can leave them out of the report.
8. The admin can see **who has answered** (to send reminders) but never **what** they answered.

In the Express Diagnostics, names are visible in the report and stored with the answers (by design).

Emails

All texts per language are in `data/emails.json`. Placeholders: `{company}`, `{test}`, `{first}` (first name), `{date}` (close date, formatted in the launch language), `{launch}`, `{n}`.

Email	To	When	Content
Invitation	Each participant	Admin opens the launch with sending, or clicks Send / Send invitations	Greeting with first name, short intro, privacy line (different for ED/ES), deadline (if any), **Start** button with the personal link, "this link is personal"
Reminder	Invited participants who haven't answered	Admin clicks Send reminder	Same layout, reminder wording and subject
Report	Recipients chosen by the admin (default: launch recipients → company contact)	Admin clicks Send report	Short note + optional admin message + **PDF attached**
Ready notice (internal)	Admins + it@adizes.com	Launch becomes Ready	Company, test, launch, counts, link to admin
Expired notice (internal)	Same	Close date passed below minimum (once)	Counts and minimum
Sign-in code (internal)	The admin signing in	Admin requests a code	6-digit code, valid 10 minutes

Sender in the reference: info@adizes.com ("Adizes Institute").

2 · Express Diagnostics (ED)

Reference code: `source/shared/ed-engine.js` (scoring, about 100 lines, no dependencies) and `source/shared/ed-report.js` (PDF). Content: `data/express-diagnostics.json` and `questions-express-diagnostics.md`.

2.1 Questionnaire

- **67 statements**, always in the same order (the order is part of the scoring: statement *n* belongs to a fixed cell).
- Each statement has **three wordings** per language:
  - `statement`: the zone-1 wording. It is the only one shown to participants and describes the healthy situation.
  - `zone2`: the attention-zone wording.
  - `zone3`: the anomaly-zone wording. The report prints one of the three depending on the group's score for that statement.
- One question per screen. Answer options, top to bottom:

Raw value stored	English	Spanish
2	Never · *Totally disagree*	Nunca · *Totalmente en desacuerdo*
3	Sometimes · *Partially disagree*	A veces · *Parcialmente en desacuerdo*
4	Often · *Partially agree*	A menudo · *Parcialmente de acuerdo*
5	Always · *Totally agree*	Siempre · *Totalmente de acuerdo*
1	I cannot answer (shown as a separate link under the options)	No puedo responder

All 67 must be answered (1–5) before sending.

> Note: the legacy questionnaire had 72 slots, but 68–72 were blank in production. The product uses 1–67.

2.2 The 16 cells (factors)

`id` is the legacy category ID; report order is ascending ID.

ID	Code	Key	English	Spanish	Statements
17	1.1 V	values	Values	Valores	1–3 (3)
18	1.2 C	climate	Climate	Clima	4–9 (6)

ID	Code	Key	English	Spanish	Statements
20	2.1 H	responsibility	Responsibility Structure	Estructura de responsabilidad	10–14 (5)
21	2.2 V	authority	Authority Structure	Estructura de autoridad	15–18 (4)
22	2.3 R	reward	Reward Structure	Estructura de recompensas	19–20 (2)
23	3.1 P	planning	Planning	Planificación	21–30 (10)
24	3.2 I	information	Information flow	Flujo de información	31–35 (5)
25	3.3 CA	corrective	Corrective Actions	Acciones correctivas	36–39 (4)
26	4/5 1 CI	client	Client interface	Interfaz con el cliente	40–44 (5)
27	4/5 2 T	transformation	Transformation	Transformación	45–49 (5)
28	4/5 3 HR	human	Human factors	Factores humanos	50–52 (3)
29	4/5 4 F	financial	Financial factors	Factores financieros	53–56 (4)
30	6.1 I	behaviour	Behaviour	Comportamiento	57–58 (2)
31	6.2 E	changes	Changes	Cambios	59–62 (4)
32	6.3 A	inefficiency	Inefficiency	Ineficiencia	63–64 (2)
33	6.4 P	ineffectiveness	Ineffectiveness	Inefectividad	65–67 (3)

2.3 Scoring — exact algorithm

Constants (`NORMS`): `upperMiddle = 3` , `lowerMiddle = 2` , `upperDispersion = 1` , `lowerDispersion = 0.7` , `scale = 4` .

Per statement (over all participants of the launch)

```
xs = [ raw − 1  for raw in answers_to_this_statement  if raw in {2,3,4,5} ]   # "cannot answer" (1) is dropped
n  = len(xs)
if n == 0:
    middle = 0; dispersion = 0; zone = 0                # nobody could answer
else:
    mean       = sum(xs) / n
    dispersion = sqrt( Σ(x − mean)² / (n − 1) )  if n > 1 else 0      # SAMPLE standard deviation
    mode       = the value with the highest frequency, ONLY if exactly one value has that frequency
    middle     = mode  if mode exists  else  mean − dispersion / 2
    zone       = 1 if middle >= 3  else  3 if middle < 2  else  2

color  = green if middle >= 3  else  yellow if middle >= 2  else  red        # middle 0 → red
border = dotted if n == 1
         else thick  if dispersion >= 1
         else thin   if dispersion >= 0.7
         else dotted
wording shown in the report:  zone 1 or 0 → statement · zone 2 → zone2 · zone 3 → zone3
                              (zone 0 also prints the suffix "· no answer")
```

Per cell (factor)

```
questions = statements of the cell
middle     = average of the statements' middles        # statements with n = 0 count as 0 (lowers
the cell)
dispersion = average of the statements' dispersions
percent    = middle / 4 × 100
n          = minimum n among its statements
color      = same thresholds on middle (≥3 green, ≥2 yellow, else red)  →  ≥75% green, ≥50% yellow
border     = same rule as statements, with the cell's n and dispersion
```

Worked example: 4 participants answer statement 1 with raw `5, 5, 4, 1`.

- "1" is dropped, so the values are `[4, 4, 3]` and n = 3.
- The mode is 4 (unique), so middle = 4: zone 1, green.
- Dispersion = 0.577 (sample standard deviation), so the border is dotted.

If raw were `5, 4`, then:

- the values are `[4, 3]`, with no unique mode;
- mean = 3.5 and dispersion = 0.7071;
- middle = 3.5 − 0.354 = 3.146, which gives green, and the border is thin.

These rules were verified against a real legacy PDF: every statement's colour and wording, and all 16 radar values (`07-verification.md`).

2.4 Report (PDF) contents

Letter size, Montserrat, about 7 pages. Visual reference: `samples/sample-report-express-diagnostics-en.pdf` / `-es.pdf`.

1. **Cover**
    - Logo, title "Express Diagnostics / Report"
    - Company and date of the report
    - Participants surveyed: the count and the list of names
    - "Survey design: distance survey of top management"
    - **At a glance:** number of cells that are red (*Key focus zone*), yellow (*Needs improvement*) and green (*Healthy*)
    - "How to read this report" paragraph
2. **Causal factors of systemic organizational problems:** a fixed diagram with nested boxes.
    - Structure:
        - External Factors
        - Internal Factors
            - Systemic Organizational Causes
                - Organizational Culture: Values, Climate
                - Strategic Planning · Organizational Structure · Authority
                - Information Flow · Corrective Actions · Rewards
        - Subsystems Symptoms: Client Interface · Transformation / Human Resources · Finance
        - Systemic Manifestations: Inefficiency · Behavior / Change · Ineffectiveness

    - Each cell box shows its label and **percent**, filled with the tint of the cell colour and framed by the cell border.
    - Legend: colour decoding (3 colours) and frame types (3 borders).
3. **Two radar charts (8 axes each, clockwise from the top)**
    - Chart 1, “Systemic organizational problems”: Values, Climate, Responsibility, Authority, Reward, Planning, Information, Corrective.
    - Chart 2, “Operational problems and systemic manifestations (consequences)”: Client, Transformation, Human, Financial, Behaviour, Changes, Inefficiency, Ineffectiveness.
    - Each chart draws the company polygon (solid), a green dotted ring at **75%** (“Normal situation”) and a red dotted ring at **50%** (“Abnormal situation”).
    - Axis labels show the percent in the cell colour.
4. **Key organizational factors (pages 4+):** colour and frame legend, then for each of the 16 cells in order:
    - a heading: “n. Name”, with “xx% · Healthy / Needs improvement / Key focus zone” on the right in the cell colour;
    - its statements, each with a small swatch (fill = statement colour, border = statement frame) and the **wording that matches its zone**;
    - statements nobody could answer, which show the base wording + “· no answer”;
    - long cells continue on the next page with “(cont.)”.
5. Footer on every page: “Adizes Institute · Express Diagnostics · Company” + page number.

The report uses the launch language for every label (`texts.<lang>.pdf` , `cells` , `diagram` , `radar` , `colors` , `colorShort` , `frames`).

2.5 What gets stored (reference)

One row per response:

- Response ID, Launch ID, Invitation ID, Employee ID, Full Name
- Submitted At (timestamp) and Language
- the 16 cell percents of that individual (a convenience only; the report uses the raw answers)
- **Q1…Q67 raw values**

Only the raw values are needed to regenerate any report.

3 · Engagement Survey (ES)

Reference code: `source/shared/es-engine.js` (scoring and aggregation; it reuses `ED.questionStats` from `ed-engine.js` for the factor scores) and `source/shared/es-report.js` (PDF). Content: `data/engagement-survey.json` and `questions-engagement-survey.md`. The questions JSON already includes the resolved answer options per question and language.

3.1 Questionnaire

For each of the **50 questions**, the participant gives:

1. **An answer**, stored as a raw value from 1 to 5. **5 is always the most positive answer.**
2. **An importance level:**
   - `1` Less important (default)
   - `2` Medium
   - `3` Most important

   Between **1 and 15** questions must be marked *Most important*. The UI blocks a 16th and shows a message. Sending is blocked with 0.
3. **An optional comment** (free text, up to 1000 characters, single line when stored). It is shown word for word and anonymously in the report.

Scales

Each question uses one of six scales. Every option shows both a primary label and a secondary hint, because the legacy data doesn't record which questions were phrased as frequency and which as agreement. Scoring is unaffected.

Scale	Questions	Options top → bottom (raw value)
F — frequency	1–4, 6, 7, 9, 11, 13, 14, 19–25, 27, 31, 32, 34–40, 43, 44, 46, 48	Never (2) · Sometimes (3) · Often (4) · Always (5) · *Don't know (1)*
A — agreement	8, 10, 12, 15–18, 26, 28–30, 33, 41, 47, 49	Absolutely disagree (2) · Mostly disagree (3) · Mostly agree (4) · Absolutely agree (5) · *Don't know (1)*
FR — frequency **reversed**	5	Never (**5**) · Sometimes (4) · Often (3) · Always (**2**) · *Don't know (1)*
AR — agreement **reversed**	45	Absolutely disagree (**5**) · Mostly disagree (4) · Mostly agree (3) · Absolutely agree (**2**) · *Don't know (1)*
S — satisfaction	42	Absolutely dissatisfied (2) … Absolutely satisfied (5) · *Don't know (1)*
C — change (last 12 months)	50	Significantly deteriorated (1) · Slightly deteriorated (2) · No tangible changes (3) · Slightly improved (4) · Significantly improved (5). **No "Don't know"**

Q5 and Q45 are negative statements, so their labels run backwards. Storing “Never” as 5 keeps “5 = good” true for every question. This matches the legacy platform. *Don't know* is shown as a separate link under the options.

Factors (15) and groups (5)

ID	Key	Group	English	Spanish	Questions
17	values	culture	Values	Valores	1–3
18	climate	culture	Climate	Clima	4–7
19	styles	culture	Styles	Estilos	8
20	responsibility	structure	Responsibility Structure	Estructura de responsabilidad	9–11
21	authority	structure	Authority Structure	Estructura de autoridad	12–14
22	reward	structure	Reward Structure	Estructura de recompensas	15–18
34	supervisor	functions	Supervisor	Supervisor	19–27
23	planning	process	Planning	Planificación	28–30
24	information	process	Information flow	Flujo de información	31–32
26	client	functions	Client interface	Interfaz con el cliente	33–34
27	transformation	functions	Transformation	Transformación	35–38
28	human	functions	Human factors	Factores humanos	39–41
30	behaviour	effects	Behaviour	Comportamiento	42–47
31	changes	effects	Changes	Cambios	48, 50
32	inefficiency	effects	Inefficiency	Ineficiencia	49

Group names:

- culture: Organizational culture
- structure: Structure
- process: Process
- functions: Organizational functions
- effects: Effects

3.2 Engagement level per participant — exact rule (legacy `calculateInvolvement`)

```
all[k]  = % of the participant's answers equal to k (k = 1..5), over ALL 50 answers ("Don't know" =
1 is included in the denominator)
most[k] = same, but only over the questions the participant marked "Most important" (importance =
3)

all45 = all[4] + all[5]     all23 = all[2] + all[3]
most45 = most[4] + most[5]  most23 = most[2] + most[3]          (0 if no "Most important" question)

checked in THIS order:
  if all45 >= 70 and most45 == 100  → "fully"       (Fully engaged)
  if all45 >= 60 and most45 >= 70   → "engaged"     (Engaged)
  if all23 >= 70 and most23 >= 70   → "disengaged"  (Disengaged)
  otherwise                         → "somewhat"    (Somewhat engaged)
```

Q50 is included like any other question (raw 1–5).

The level descriptions shown in the report (`texts.<lang>.levels`) are:

- **Fully engaged:** passionate about their work and the organization, ...
- **Engaged:** focused on achieving results, ...
- **Somewhat engaged:** selective about where they put their energy, ...
- **Disengaged:** work only when they have to, ...

3.3 Aggregation for the group report

Input: every response of the launch, as `{ answers[50], importance[50], area, comments[50] }`.

1. **Overall levels:** count and % of respondents in each level. KPI: **Fully engaged + Engaged %** (“positive”).
2. **By area:**
    - group respondents by the area stored with their response;
    - an area with **≥ 5** responses gets its own column;
    - all smaller areas, and respondents without an area, are pooled into **“Other areas”**, shown only if the pool has **≥ 5** and at least one real area is shown;
    - otherwise those answers only count in the company total, and the report says how many were left out;
    - areas are sorted alphabetically.
3. **Per question:**
    - distribution `dist[1..5]` (counts);
    - **most-important %** = respondents who marked it 3 ÷ respondents;
    - comments (non-empty ones).
4. **Factors:** the same statistic as the Express Diagnostics (section 2.3 of `02-express-diagnostics.md`).
    - Each question's `middle` is computed from its raw answers: 1 (Don't know) is dropped, 2–5 map to 1–4, then the mode or mean − σ/2.
    - A factor's middle is the average of its questions' middles; percent = middle / 4 × 100.
    - Colour: ≥ 75% green (“All OK”), ≥ 50% yellow (“Attention zone”), else red (“Anomaly zone”).
    - **Q50 is left out of the factors** (its scale means something else, and its 1 is not “don't know”). So *Changes* = Q48 only.

5. **What matters most:** questions with most-important % > 0, sorted by that % descending (ties: question order). Keep the top 10.
6. **Minimums:** no report below 5 responses.

3.4 Report (PDF) contents

Letter size, Montserrat, about 9 pages. Visual reference: `samples/sample-report-engagement-survey-en.pdf` / `-es.pdf`.

1. **Cover**
    - Logo, title “Engagement Survey / Report”
    - Company, survey (launch name), date of the report
    - Responses “n of N invited”
    - Anonymity note
    - Four level tiles with %, and the **Fully engaged + Engaged** KPI
    - Contents
2. **Distribution by engagement level:** one coloured block per level with %, number of people, a bar and the level description. A dark bar at the end shows the positive KPI.
3. **Engagement by area:** a table with columns Company, each area (≥5) and Other areas (if shown), and these rows:
    - Respondents
    - one row per level, with %
    - Fully engaged + Engaged

    Groups of 5 columns per table, with the Company column repeated in each. A note says how many answers come from hidden small areas, or that no area reaches 5.
4. **Organizational factors:** a grid with 5 group columns (black headers). Each factor is a box with its name and %, filled with its colour tint. A legend explains the 3 colours.
5. **What matters most to employees:** the top-10 list. Each item shows:
    - the most-important % (in red);
    - the question text;
    - a horizontal stacked bar of how it was answered.
6. **All questions:** grouped by factor in questionnaire order. Each question has a stacked bar of its answer distribution (%) and the most-important % on the right in red.
    - Bar colours: 5 green · 4 blue · 3 yellow · 2 red · 1 (Don't know) grey. For Q50, 1 (significantly deteriorated) is dark red.
    - A note explains that green is always the most positive answer, including for the reversed Q5/Q45, and that Q50 uses its own scale.
7. **Comments** (optional; the admin decides when generating): grouped by question number and text, each comment quoted word for word. If there are none, “No comments were left.”

8. Footer on every page.

3.5 What gets stored (reference) — anonymous

One row per response:

Field	Value
Response ID	random
Launch ID	—
Submitted On	**date only** (yyyy-mm-dd)
Language	launch language
Area	copied from the employee at submission time
Result	computed level
Q1…Q50	raw answers
I1…I50	importance
C1…C50	comments

The reference inserts rows at a random position. No employee or invitation identifiers are stored.

4 · Building the reports (PDF)

How the reference does it

- The report is generated **in the admin's browser** with **jsPDF 2.5.1** and the **Montserrat** font embedded (Light, Regular, SemiBold, Bold), at Letter size (612 × 792 pt).
- The server only supplies the data (`reportData`):
  - ED: the raw answers and the participants' names;
  - ES: the anonymous responses.
- The browser computes the results with the same engines (`ED.score` / `ES.aggregate`), draws the PDF and uploads it (base64). It is stored in Google Drive and then emailed as an attachment.

Renderer entry points (plain JavaScript, no framework):

```
// assets: fonts (base64) + logos, loaded once
const A = await getPdfAssets('https://…/shared/assets/');      // source/shared/pdfkit.js

// Express Diagnostics
const doc = renderEdPdf(A, 'en', {
  result: ED.score(responses),          // responses: [[67 raw values], …]
  company: 'Acme', participants: ['Ana López', …], dateIso: new Date().toISOString(),
});

// Engagement Survey
const doc = renderEsPdf(A, 'es', {
  agg: ES.aggregate(responses),         // responses: [{answers, importance, area, comments}, …]
  company: 'Acme', launchName: 'Annual survey 2026', invited: 34, dateIso: …, comments: true,
});

doc.output('blob')   // or 'datauristring', 'arraybuffer'
```

The renderers need these globals:

- `window.jspdf` (jsPDF UMD build)
- `ED_I18N` / `ES_I18N` : the texts, which are the same as `texts` in `data/*.json`
- `ED` / `ES` : the engines

`tools/sample-reports.mjs` shows a complete working setup that produced the files in `samples/` .

Options for your platform

Option	How	Pros	Cons
A. Reuse the reference renderers in the browser *(fastest)*	Your backend returns the report data as JSON (same shape as above). Your admin page loads `jspdf` , the engines, the texts and the renderers, then uploads or downloads the PDF	Pixel-identical to the samples and already tested; no server dependencies	Generated client-side; the texts must be shipped to the page

Option	How	Pros	Cons
B. Reuse the same renderers on the server (Node.js)	Run the same files in Node: jsPDF works in Node. Load them with a small wrapper that defines the globals, or run a headless browser as `tools/sample-reports.mjs` does	Identical output; reports can be generated by jobs or emailed automatically	Needs Node on the server
C. Rebuild as HTML/CSS templates → PDF	Render each page as HTML (your stack's templates), then print with a headless browser (Playwright / Puppeteer `page.pdf()`) or a service like Gotenberg / WeasyPrint. Radars and bars as inline SVG	Easiest for your team to restyle and maintain; text selectable; any language	More work up front; you must match the samples yourself

Recommendation: start with **A** or **B**. They give you identical, already-verified reports on day one. Move to **C** only if you need to restyle reports often. Whatever you pick, compute the numbers with the engines (or a verified port) and keep the PDF layer "dumb": it only draws what the engine returns.

Design tokens

Token	Value	Used for
Ink	`#111111`	Text, headings
Muted / Soft	`#5f6368` / `#8a8f96`	Secondary text, footers
Line / Paper	`#e4e4e4` / `#f5f5f5`	Rules, panels
Adizes red	`#d7141a`	Accents, heading bar, "most important" %
Green / Yellow / Red (status)	`#1e8e4e` / `#d9a400` / `#d7141a`	Healthy / attention / anomaly (yellow text `#9a7200`)
Status tints	`#dcf2e5` / `#fff0bf` / `#fbd6d7`	Box fills for green / yellow / red
ES levels	fully `#1e8e4e` · engaged `#2457c5` · somewhat `#d9a400` · disengaged `#d7141a`	Level colours (tints `#dcf2e5`, `#e3eafb`, `#fff0bf`, `#fbd6d7`)
ES answer bars	5 `#1e8e4e` · 4 `#4f7fe0` · 3 `#e8b923` · 2 `#d7141a` · 1 `#c4c4c4` · Q50 value 1 `#7a0c10`	Stacked distribution bars
Font	Montserrat 300/400/600/700	Everything
Page	US Letter (612 × 792 pt), 54 pt side margins	—

Assets (`source/shared/assets/`):

- `adizes-logo-color.png`: red mark + black wordmark, for white backgrounds
- `adizes-logo-color-white.png`: for dark backgrounds
- `arrow-red.png` / `arrow-white.png`
- `fonts/Montserrat-*.ttf` (SIL Open Font License)

Layout notes that are easy to miss

- Section headings have a short **red vertical bar** on the left.
- **Express Diagnostics with one participant:**
  - the frame legend is omitted;
  - swatches are outlined in their status colour instead of the frame style;
  - the cover says “Participants” instead of “Participants surveyed: n”.
- ED radars:
  - the 100% radius is the outer ring;
  - the dotted rings at 75% (green) and 50% (red) are the norms;
  - axis labels carry the percent in the status colour.
- ED key-factor section: every statement shows the **zone wording**, not the participant wording, except for zone 0 (nobody could answer), which shows the base statement + “· no answer”.
- ES area table:
  - at most 5 data columns per table, with the Company column repeated;
  - long row labels wrap (Spanish: “Totalmente comprometido + Comprometido”).
- ES “All questions” and “What matters most” bars show **% labels** inside segments that are wide enough.
- Page breaks never split a single statement or question; a section that continues shows “(cont.)”.
- File name used by the reference:
  - `Express-Diagnostics-<company>-<yyyy-mm-dd>.pdf` (Spanish: `Diagnostico-Expres-…`)
  - `Engagement-Survey-<company>-<yyyy-mm-dd>.pdf` (Spanish: `Encuesta-de-Compromiso-…`)

5 · Participant experience

Reference: `source/shared/survey.js` (shared by both tests), `source/express-diagnostics/src/app.js`, `source/engagement-survey/src/app.js`, styles in `source/shared/ui.css` + `survey.css`. Screenshots: `screens/` (desktop and mobile, both tests).

Entry: the personal link

`https://www.adizes.com/express-diagnostics?t=TOKEN` or `…/engagement-survey?t=TOKEN`.

- The token is a random 24-character alphanumeric string, one per invitation.
- The page calls `p_load` with the token and gets the state, the test type, the **launch language**, the company name and the close date. For ED it also gets the participant's first name.

State	Screen
no `t` in the URL	"You need your personal link"
unknown or removed token	"This link isn't valid" (mentions info@adizes.com)
launch is Draft	"This … isn't open yet"
launch not Open (Ready / Report sent / Closed)	"This … is closed"
invitation already Completed	"You have already answered"
open	Intro (or Resume)

All texts are under `texts.<lang>.states` / `intro` / `ui` / `review` / `thanks` in `data/*.json`.

Screens

1. **Intro:**
   - eyebrow with the test name and company;
   - ED only: "Hi, {first}";
   - title, body and 3–4 bullets (ES bullets explain anonymity, importance and comments);
   - a note about "I cannot answer / Don't know";
   - meta line (number of items, time, and "Open until {date}" if there is a close date);
   - **Start** button (Enter also starts).
2. **Resume:** if answers were saved earlier in this browser for this token, the participant chooses "Continue where I left off" or "Start over".
3. **One item per screen:**
   - header: "Area x/y · Factor name", with "n of N" on the right;
   - a progress bar split into one segment per section;
   - the item text;
   - the options as large buttons numbered 1–4 (ES Q50: 1–5);
   - "I cannot answer" / "Don't know" as a separate link;
   - **ES only:**
     - an importance control: three segments, **Less important (grey) · Medium (yellow) · Most important (green)**, defaulting to Less important;

        - a counter “Most important: n of 15”;
        - “+ Add a comment (optional)”.
    - Navigation: **Back** and **Next**. Next is disabled until the item is answered.
    - **ED auto-advances** about 0.3 s after an answer is chosen. ES doesn't, because importance and comment may follow.
    - Keyboard:
        - `1`–`n` choose an option;
        - `0` chooses cannot-answer / don't-know;
        - `Enter` goes to the next item.
    - Changing an answer or the importance updates the screen in place, without re-rendering.
4. **Review** (after the last item):
    - every item grouped by section, with the chosen answer;
    - ES also shows a “★ Most important” tag and a “Comment” tag;
    - missing answers are highlighted;
    - a summary line, e.g. “You answered all 50 questions. 2 as ‘Don't know’. Most important: 7 of 15.”
    - Clicking any row opens that item, with a **Back to review** button.
    - **Send my answers** (top and bottom) is disabled while answers are missing or, for ES, while no question is marked Most important.
5. **Sending → Thank you:**
    - ED: “Thank you, {first}” + the group report is sent to the company through Adizes.
    - ES: “Thank you” + answers recorded anonymously.
    - Participants never see scores.

Rules to keep

- **Autosave:** progress (current item, answers, importance, comments) is stored on the device under a key per token: `adz-ed:<token>` / `adz-es:<token>` in localStorage. It is cleared after a successful submit or when the link is no longer open.
- **Language:** always the launch language from `p_load`. There is no language switch for participants.
- **Single submission:** the server rejects a second submit for the same token (`already_completed`). The page then shows “You have already answered”.
- **Validation on the server** (never trust the page):
    - ED: exactly 67 integers between 1 and 5.
    - ES: exactly 50 answers between 1 and 5 and 50 importance values between 1 and 3, with between 1 and 15 marked 3. Comments are trimmed to 1000 characters, newlines are collapsed, and values that start with `= + - @` are made safe for spreadsheets.
- Submissions are accepted only while the launch is **Open**.
- Layout target: the longest item (ES Q34 in Spanish) with all controls fits a 1366 × 768 laptop screen at 100% zoom without scrolling. On phones the page scrolls normally.

6 · Admin, data model and API

The reference runs on Google Apps Script with Google Sheets as the database (`source/apps-script/`). You will replace both with your platform and database. This chapter lists what the admin must do, the data you need to store, and the API contract the participant pages use.

6.1 Admin features (what to rebuild)

Screenshots: `screens/admin-*.png`.

Area	Features
Sign-in	Admin-only. The reference uses an emailed 6-digit code (10 min, 5 attempts, 30 s between requests) and a 7-day signed session. The allow-list holds exact emails plus whole domains (e.g. `@nuclea.solutions`). **Checks are done on the server for every call.** Use your platform's own auth
Companies	List with launch/employee counts; create / edit (name, country, default language, contact name and email, notes); archive / restore
Employees	Per company: list with area chips; add / edit (name, email, area, position); **bulk paste** of rows `name, email, area, position` (tab- or comma-separated, de-duplicated by email); archive / restore. Email must be unique within the company
Launches	Per company, separated by test (ED / ES), plus a global list with tabs All / ED / ES and a status filter
New launch	Test type, name, **language**, optional close date, minimum responses (**ED only**; ES is fixed at 5 and the field is hidden), report recipients, internal notes, participants picker (search; select all / none). **ES requires ≥ 5 active employees in the company** (otherwise it explains why and offers no form) **and ≥ 5 participants**
Launch page	Status, actions per status (open & send invitations / open without sending / send pending invitations / send reminder / copy all links / edit participants / close & mark ready / reopen / archive / edit / delete draft); KPIs (responses x of y with progress and minimum marker, minimum, close date, open/ready since); participants table (name, email, area, status, date, copy link / send / resend)
Report	**Generate** (enabled once the minimum is reached; ES has an "Include participants' comments" option) → PDF saved and linked; **Send** to recipients (comma-separated) with an optional message; shows when and to whom it was last sent; can regenerate and resend
Anonymity notice	ES launch pages state that answers are stored without names and small areas are never shown alone

6.2 Data model (reference — adapt to your database)

Company: id, name, country, language (`en` / `es`), contact name, contact email, notes, status (Active/Archived), created/updated.

Employee: id, company id, full name, email, **area**, position, status (Active/Archived), created/updated.

Launch:

- id, company id, **type** (`ED` / `ES`), name, **language**, status (Draft/Open/Ready/Report sent/Closed);

- min responses (ED ≥ 1; ES = 5), close date (`yyyy-mm-dd` , optional), recipients (comma-separated emails);
- created/opened/ready/closed at;
- report URL, report file id, report generated at, report sent at, report sent to;
- notice (`expired` once the date passes below the minimum), notes, updated at.

Invitation: id, launch id, employee id, **token** (24 random alphanumeric characters, unique), status (Pending/Sent/Completed/Removed), sent at, reminded at, reminders (count), completed on (ED: timestamp; **ES: date only**), created at.

ED response: response id, launch id, invitation id, employee id, full name, submitted at, language, the 16 cell percents (optional convenience), **Q1…Q67** (raw 1–5).

ES response (anonymous): response id, launch id, **submitted on (date only)**, language, **area**, result (level), **Q1…Q50** (raw 1–5), **I1…I50** (importance 1–3), **C1…C50** (comments). **No employee, invitation or name columns.** Store them so that row order or timestamps can't be linked to invitations (the reference inserts at a random position).

6.3 Participant API (used by the answering pages)

Single endpoint, `POST` , JSON body (sent as `text/plain` to avoid a CORS preflight), JSON response. All responses carry `ok: true|false` . Errors are `{ ok:false, error:'<code>' }` .

`p_load`

```
// request
{ "action": "p_load", "t": "<token>" }
// response
{ "ok": true, "state": "open|completed|closed|not_open", "type": "ED|ES", "lang": "en|es",
  "company": "Acme", "closeDate": "2026-11-30", "firstName": "Ana" }      // firstName only for ED
// errors: invalid_link
```

`p_submit`

```
// request — ED
{ "action": "p_submit", "t": "<token>", "lang": "es", "v": "1.2.0", "answers": [67 integers 1..5] }
// request — ES
{ "action": "p_submit", "t": "<token>", "lang": "en", "v": "1.2.0",
  "answers": [50 integers 1..5], "importance": [50 integers 1..3], "comments": [50 strings, "" if
none] }
// response
{ "ok": true }
// errors: invalid_link, already_completed, closed, invalid_answers, invalid_importance,
unknown_type
```

On success the server:

1. saves the response;
2. marks the invitation Completed;

3. runs the **ready check**: if everyone has answered, or the close date has passed, and the minimum is met, the launch becomes **Ready** and admins are notified.

The whole submission runs under a lock so double clicks can't create two responses.

6.4 Admin API (reference)

One authenticated entry point, `adminApi(action, payload, sessionToken)`. Each call returns the full refreshed state, plus `savedId` / `sent` when relevant. Your platform will have its own endpoints. The list below is the behaviour to keep.

Action	Payload	Rules
`state`	—	Companies, employees, launches (with `total` / `done` counts), invitations (with links)
`saveCompany`	id?, name, country, language, contactName, contactEmail, notes	name required; valid email
`archiveCompany`	id, archived	—
`saveEmployee`	id?, companyId, name, email, area, position	email unique per company (`duplicate_email`)
`importEmployees`	companyId, rows[]	skips existing emails
`archiveEmployee`	id, archived	—
`saveLaunch`	id?, companyId, type, name, language, closeDate, minResponses, recipients, notes, employeeIds[]	ES: `es_min_employees` if the company has < 5 active employees, `es_min_participants` if < 5 participants; ES minimum forced to 5
`deleteLaunch`	id	drafts only
`setParticipants`	launchId, employeeIds[]	Draft/Open only; people who already answered are always kept; ES never below 5
`openLaunch`	launchId, send	Draft → Open (needs ≥ 1 participant); optionally sends invitations
`sendInvites`	launchId, inviteIds?	Open only; to Pending (or the given ones)
`remind`	launchId	to Sent and not completed; reminders +1
`finish`	launchId	Open → Ready if ≥ minimum (`below_minimum`)
`reopen`	launchId, closeDate?	Ready/Report sent/Closed → Open
`close`	launchId	→ Closed (archive)
`reportData`	launchId	needs ≥ minimum. ED: `{type, lang, company, launchName, dateIso, total, done, names[], responses[][]}` . ES: same header + `responses[{answers, importance, area, comments}]` (no names)

Action	Payload	Rules
`saveReport`	launchId, pdf (base64), fileName	stores the PDF, records URL / id / time
`sendReport`	launchId, to, note	needs a saved report; not for Drafts; Ready → Report sent

Error codes and the admin's messages (English):

Code	Message
`forbidden`	Session expired / not an admin
`invalid_code`	Code not valid or expired
`too_many_attempts`	Request a new code
`name_required`	The name is required
`invalid_email`	Check the email
`duplicate_email`	Employee already exists in this company
`invalid_recipients`	Check recipients' emails
`invalid_date`	Check the date
`below_minimum`	Minimum not reached
`no_participants`	Add at least one participant
`not_draft`	—
`not_open`	—
`no_report`	Generate the report first
`no_recipients`	—
`only_drafts`	Only drafts can be deleted
`not_ready`	Open the launch first
`launch_not_editable`	—
`company_not_found`	—
`not_found`	—
`not_reopenable`	—
`invalid_type`	—
`es_min_employees`	Needs at least 5 active employees
`es_min_participants`	Needs at least 5 participants

6.5 Scheduled job

Once an hour, the job checks every Open launch with the ready rule. This is how close dates take effect, and how the single “closed below minimum” notice is sent.

6.6 Security checklist

- Admin authorization on the **server** for every admin call. Never rely on the page alone.
- Participant tokens:
  - random and unguessable (at least 24 characters);
  - only reveal what `p_load` returns (no other people's data, never answers);
  - invalid after completion or removal.
- ES anonymity rules (`01-system-overview.md`) enforced on the server, including the 5-response, 5-per-area and 5-employee minimums.
- Sanitize free text:
  - strip control characters;
  - limit lengths;
  - escape HTML in emails and pages;
  - neutralize leading `= + - @` if data is ever exported to spreadsheets.
- Only admins can reach reports.

7 · Verifying your implementation

Test vectors

`data/test-vectors/` holds inputs with the exact outputs of the reference engines. Numbers are rounded to 6 decimals, so compare with a tolerance of 1e-6.

`express-diagnostics.json`

Case	Input	Check
Golden	One real respondent (67 raw answers) reconstructed from a legacy s.adizes.com PDF	Every statement's `color`, `zone`, `border`; every cell's `percent`, `color`
Group of 5	5 deterministic respondents	All question and cell fields, including dispersion and borders
Mode rule	Q1 answers `[5,5,4,1]`	n = 3, middle = 4 (unique mode), dispersion 0.57735
No unique mode	Q1 answers `[5,4]`	middle = 3.146447 (mean − σ/2), dispersion 0.707107

Golden cell values (67-statement bank):

Cell	Value	Cell	Value
Values	50.0% yellow	Client interface	55.0% yellow
Climate	37.5% red	Transformation	70.0% yellow
Responsibility	40.0% red	Human factors	41.7% red
Authority	50.0% yellow	Financial factors	62.5% yellow
Reward	25.0% red	Behaviour	12.5% red
Planning	72.5% yellow	Changes	62.5% yellow
Information	50.0% yellow	Inefficiency	12.5% red
Corrective	75.0% green	Ineffectiveness	50.0% yellow

The legacy PDF was produced when blank slots 68–72 still existed, so its Planning (70.5%) and Transformation (58.3%) differ from the values above. With those 5 extra answers, the reference reproduces the legacy PDF exactly (`source/express-diagnostics/test/engine.test.mjs`).

`engagement-survey.json`

- `classification` : 6 respondents, one for each branch of the rule (fully, engaged, somewhat ×2, disengaged, and a case where “Don't know” dilutes the percentages). Compare `level` , `all45` , `all23` , `most45` , `most23` .
- `aggregate` : 15 respondents (Sales 6, Operations 5, Finance 2, HR 1, no area 1). Compare:

- `overall` (counts, %, positive KPI);
- `areas`: only Operations and Sales;
- `other`: not shown, 4 hidden;
- `cats`: 15 factors with middle, dispersion, percent, colour;
- `top`;
- per-question `dist` and `mostPct`.

Acceptance checklist

Content

- [ ] ED 67 statements and ES 50 questions in the original order, in English and Spanish, matching `data/*.json`
- [ ] Raw values stored exactly as specified (ED 1–5 with 1 = cannot answer; ES 5 = always positive, Q5/Q45 reversed, Q50 no don't-know)
- [ ] ES importance stored 1–3; between 1 and 15 marked “Most important”

Scoring

- [ ] Both test-vector files pass
- [ ] ED report wording: statement / zone 2 / zone 3 chosen by the statement's middle; zone 0 shows the base wording with “no answer”
- [ ] ES factors exclude Q50

Rules

- [ ] ED report from 1 response (or the launch minimum); ES only from 5
- [ ] ES launch requires ≥ 5 active employees and ≥ 5 participants; participants can't drop below 5
- [ ] ES areas with < 5 responses never shown alone; pooled “Other areas” only if ≥ 5
- [ ] ES responses contain no person or invitation identifiers; no time of day; order not traceable
- [ ] A token can submit once; only while the launch is Open
- [ ] The launch language drives invitation, survey, thank-you and report
- [ ] Auto-Ready on last answer or close date (with minimum); a single notice when the date passes below the minimum

Reports

- [ ] ED and ES PDFs match the structure of `samples/` in both languages
- [ ] Generated reports are stored and can be emailed to chosen recipients with an optional message

Participant UI

- [ ] One item per screen, progress by section, keyboard shortcuts, autosave/resume, review list with click-to-edit, thank-you only (no results)

Re-running the reference locally

```
git clone https://github.com/Adizes/alis-sample && cd alis-sample
npm install
npm test                          # engines, backend (Apps Script mocked) and full browser journey
node tools/export-handoff.mjs     # regenerates data/, question tables and test vectors
node tools/sample-reports.mjs     # regenerates the sample PDFs
```

Appendix A · Express Diagnostics — all statements (EN, ES)

Generated from the source files by `tools/export-handoff.mjs` (v1.2.0). Machine-readable: `data/express-diagnostics.json`.

Each statement has three wordings. The participant only sees the **statement**. The report prints the statement when the group score is good (zone 1), **zone 2** when it is in the attention zone, and **zone 3** in the anomaly zone (rules in `02-express-diagnostics.md`).

Answer scale (raw values stored): 1 = I cannot answer · 2 = Never · 3 = Sometimes · 4 = Often · 5 = Always.

1.1 V · Values / Valores (cell 17, key `values`)

English

#	Statement (zone 1, shown to participants)	Zone 2 (attention)	Zone 3 (anomaly)
1	Our value system is clearly articulated in a few words / phrases	Our value system is not clearly articulated	Our value system is not articulated
2	Our value system is respected in our daily business practice, the declared values correspond to the demonstrated ones	Our value system is not always respected in everyday business practice, the declared values do not always correspond to the demonstrated ones	Our value system is often not adhered to in our daily business practice, the declared values often do not correspond to the demonstrated ones
3	Our value system is the same across all divisions	Our value system is not the same in some departments	Our value system is not the same for many departments

Español

#	Statement (zone 1, shown to participants)	Zone 2 (attention)	Zone 3 (anomaly)
1	Nuestro sistema de valores está claramente articulado en unas pocas palabras/frases	Nuestro sistema de valores no está claramente articulado	Nuestro sistema de valores no está articulado
2	Nuestro sistema de valores es respetado en nuestra práctica empresarial diaria, los valores declarados corresponden a los demostrados	Nuestro sistema de valores no siempre es respetado en nuestra práctica empresarial diaria, los valores declarados no siempre corresponden a los demostrados	Nuestro sistema de valores a menudo no se cumple en nuestra práctica empresarial diaria, los valores declarados a menudo no corresponden con los demostrados
